Standalone Assessment Questions	Separate Profiler Questions	Weighted Dimensions	Verdict Levels

1. Weighted Scoring Model

The standalone assessment uses deterministic Model1 arithmetic: answer points, named signals, dimension means, then the weighted composite. The quick profiler is independent.

Confidence override: Negative Confidence Signal remains a pre-score override: low Q23 delivery confidence or the existing Q20 minimal/none value-saturation mapping. The numeric composite remains answer-based.

DIMENSION	WEIGHT	SIGNAL GROUPS	DIMENSION MEAN
Workforce Intensity	30%	MAX(Q13,Q21); Q15; Q16; Q20	Mean of 4 signals
Coordination Entropy	25%	Q14; MAX(Q18,Q22)	Mean of 2 signals
Commercial Exposure	20%	MAX(Q7,Q9); Q10; Q17	Mean of 3 signals
Volatility Control	15%	Q11; Q12	Mean of 2 signals
Measurement Maturity	10%	Q19; MAX(Q24,Q25,Q26)	Mean of 2 signals

Score answers as 0, 50 or 100. Use MAX for grouped signals, then take the arithmetic mean of each dimension's signals. Multiply each mean by its weight / 100 and sum the five contributions. Preserve raw precision for verdict selection; round only the displayed score to one decimal place.

Score Thresholds (0–100)

SCORE RANGE	VERDICT
0 to <20	**Structurally Safe**
20 to <40	**Execution Heavy**
40 to <60	**Price Sensitive**
60 to <80	**Structurally Fragile**
80 to 100	**Do Not Proceed Without Repricing**

Example only: dimension means 62.5, 50, 33.333..., 25 and 100 give contributions 18.75 + 12.5 + 6.666... + 3.75 + 10 = 51.666..., displayed as 51.7. Different answers produce different scores. AI cannot supply numbers or alter the deterministic verdict. No margin-loss forecast or staffing percentages are inferred.

2. Quick Risk Profiler

This is a separate, independent quick-risk flow. It does not prefill the standalone full assessment or skip its questions. Profiler risk labels are not Model1 points.

QUICK RISK PROFILER — ALL 6 QUESTIONS

P1 **What decision are you evaluating with this assessment?**

Signal: EngagementState | Dimension: Commercial Exposure
The type of decision shapes how much pricing flexibility remains.
Note: Topic overlaps full-assessment Q7; answers are not transferred between flows.

OPTION	PROFILER RISK
New client win / pitch acceptance	Low
Renewal / contract extension	Low
Scope expansion without repricing	High
Escalation on a live account	High
Strategic / leadership-driven exception	Medium
Exploratory / no active decision	Low

P2 **How would you classify this engagement today?**

Signal: EngagementState | Dimension: Commercial Exposure
Engagement maturity affects how predictable the delivery effort will be.
Note: Topic overlaps full-assessment Q9; answers are not transferred between flows.

OPTION	PROFILER RISK
New (pre-kickoff / onboarding phase)	Medium
Ongoing (in delivery < 6 months)	Medium
Ongoing (in delivery 6–12 months)	Low
Ongoing (in delivery 12+ months)	Low
Renewal / scope expansion of existing engagement	Medium

P3 **How would you rate client volatility?**

Signal: ClientVolatility | Dimension: Volatility Control
Client stability directly impacts coordination cost and rework risk.
Note: Topic overlaps full-assessment Q11; answers are not transferred between flows.

OPTION	PROFILER RISK
Low (stable stakeholders, clear expectations)	Low
Medium	Medium
High (frequent changes, multiple decision-makers)	High

P4 **What's the planned senior leadership involvement?**

Signal: SeniorDependency | Dimension: Workforce Intensity
Senior involvement in delivery signals that junior/mid teams cannot carry the engagement.
Note: Topic overlaps full-assessment Q13; answers are not transferred between flows.

OPTION	PROFILER RISK
Minimal (oversight only)	Low
Periodic (key moments)	Medium
Frequent (ongoing)	High
Continuous (embedded)	High

P5 What's the execution vs thinking mix?

Signal: IterationLoad proxy | Dimension: Workforce Intensity

Thinking-heavy work is harder to scope, price, and delegate.

Note: Topic overlaps full-assessment Q15; profiler options are separate and answers are not transferred.

OPTION	PROFILER RISK
Execution-heavy	Low
Balanced	Medium
Thinking-heavy	High

P6 Where is AI primarily expected to substitute effort?

Signal: AILeverage | Dimension: Measurement Maturity

The layer where AI replaces human effort determines whether it reduces cost or increases oversight burden.

Note: Topic overlaps full-assessment Q19; answers are not transferred between flows.

OPTION	PROFILER RISK
Junior execution	Low
Mid-level production	Medium
Senior thinking / review	High
No clear substitution	High

3. Full Assessment — All 27 Questions

The full assessment does not import quick-profiler answers. Industry selection (Q6) controls conditional variants. The POINTS column applies to Model1-scored answers; Q23 is override-only and Q27 is narrative-only.

CONTACT & CONTEXT

Q1 What's your full name?

Identifier field — no risk score.

Q2 What's your work email?

Identifier field — no risk score.

Q3 What's your role or title?

Identifier field — no risk score.

Q4 What's your organization name?

Identifier field — no risk score.

Q5 What's your organization size?

Signal: Heatmap indicator only
Larger organizations create more coordination layers that consume margin.

OPTION	POINTS
50–500	—
500–1,000	—
1,000–1,500	—
1,500–2,000	—

Q6 Which industry do you belong to?

Note: Controls conditional questions for Q7 decision label, Q10 engagement types, Q10b delivery model, and Q15 mix options. Does not score itself.

OPTION	POINTS
Marketing & Advertising	—
ITeS	—
Management Consulting	—
Computer Software	—

Q7 What decision are you evaluating with this assessment?

Signal: EngagementState | Dimension: Commercial Exposure
The type of decision shapes how much pricing flexibility remains.
Note: ITeS variant: 'New client win / pitch acceptance' !' 'New contract / SOW acceptance'.

OPTION	POINTS
New client win / pitch acceptance (ITeS: New contract / SOW acceptance)	0
Renewal / contract extension	0
Scope expansion without repricing	100
Escalation on a live account	100
Strategic / leadership-driven exception	50
Exploratory / no active decision	0

CLIENT ENGAGEMENT CONTEXT

Q8 Specify Context

Signal: Context only — not in the Model1 composite
Multi-client assessments carry compounding coordination risk.

OPTION	POINTS
Single client	—
Group of clients – Org level	—

Q9 How would you classify this engagement today?

Signal: EngagementState | Dimension: Commercial Exposure
Engagement maturity affects how predictable the delivery effort will be.

OPTION	POINTS
New (pre-kickoff / onboarding phase)	50
Ongoing (in delivery < 6 months)	50
Ongoing (in delivery 6–12 months)	0
Ongoing (in delivery 12+ months)	0
Renewal / scope expansion of existing engagement	50

Q10 What's the engagement type?

Signal: PricingRigidity | Dimension: Commercial Exposure
Fixed-fee models absorb scope creep risk that retainers can pass through.
Note: Options are industry-specific. Retainer scores 0; hybrid/T&M/managed services 50; fixed fee/commission/outcome-based 100.

OPTION	POINTS
[Marketing & Advertising] Commission	100
[Marketing & Advertising] Fixed Fees	100
[Marketing & Advertising] Retainer	0
[Marketing & Advertising] Outcome based	100
[Marketing & Advertising] Hybrid – Retainer + Commission	50
[Marketing & Advertising] Hybrid – Retainer + Outcome based	50
[ITeS] Time & Materials (T&M)	50
[ITeS] Fixed Price	100
[ITeS] Managed Services	50
[ITeS] Retainer / Ongoing Support	0
[ITeS] Outcome / Milestone-based	100
[ITeS] Hybrid	50
[Management Consulting] Fixed Fee / Project-based	100
[Management Consulting] Retainer / Advisory	0
[Management Consulting] Time & Materials	50
[Management Consulting] Outcome / Success-based	100
[Management Consulting] Hybrid	50
[Computer Software] Implementation / Professional Services	100
[Computer Software] Managed Services	50
[Computer Software] SaaS + Services Hybrid	50
[Computer Software] Fixed Price Development	100
[Computer Software] T&M Development	50
[Computer Software] Outcome-based	100

Q10b What is the delivery model?

Signal: Heatmap indicator only
Onshore/offshore mix affects coordination overhead and margin risk.
Note: Conditional — shown only for ITeS and Computer Software industries.

OPTION	POINTS
Onshore only	—
Offshore only	—
Hybrid onshore/offshore	—
Nearshore	—

Q11 How would you rate client volatility?

Signal: ClientVolatility | Dimension: Volatility Control
Client stability directly impacts coordination cost and rework risk.

OPTION	POINTS
Low (stable stakeholders, clear expectations)	0
Medium	50
High (frequent changes, multiple decision-makers)	100

Q12 What's the stakeholder complexity level?

Signal: StakeholderLoad | Dimension: Volatility Control
More stakeholders mean more alignment cycles and hidden decision drag.

OPTION	POINTS
Low	0
Medium	50
High	100

PLANNED DELIVERY STRUCTURE

Q13 How involved is senior leadership in day-to-day delivery?

Signal: SeniorDependency (combined with Q21) | Dimension: Workforce Intensity
Senior involvement in delivery signals that junior/mid teams cannot carry the engagement independently.

OPTION	POINTS
Minimal (strategic oversight only)	0
Periodic (key milestones)	50
Frequent (weekly touchpoints)	100
Continuous (hands-on delivery)	100

Q14 What's the mid-level oversight intensity?

Signal: CoordinationIntensity | Dimension: Coordination Entropy
Mid-level oversight absorbs coordination costs that are often invisible in project budgets.

OPTION	POINTS
Low	0
Medium	50
High	100

Q15 What's the execution vs thinking mix?

Signal: IterationLoad proxy | Dimension: Workforce Intensity
Thinking-heavy work is harder to scope, price, and delegate.
Note: ITeS adds: Advisory / Solutioning-heavy (HIGH). Management Consulting adds: Strategy / Advisory-heavy (HIGH). Computer Software adds: Technical / Implementation-heavy (MEDIUM).

OPTION	POINTS
Execution-heavy	0
Balanced	50
Thinking-heavy	100
[ITeS] Advisory / Solutioning-heavy	100
[Management Consulting] Strategy / Advisory-heavy	100
[Computer Software] Technical / Implementation-heavy	50

DELIVERY DYNAMICS

Q16 What's the expected or current iteration intensity?

Signal: IterationLoad | Dimension: Workforce Intensity
High iteration erodes margin through repeated cycles of rework and refinement.

OPTION	POINTS
Low	0
Medium	50
High	100

Q17 What's the likelihood of scope change?

Signal: ScopeElasticity | Dimension: Commercial Exposure
Scope changes without repricing are the most common source of margin leak.
Note: Computer Software context appends: 'Including technical dependency changes outside your control.'

OPTION	POINTS
Low	0
Medium	50
High	100

Q18 How much cross-functional coordination is required?

Signal: CoordinationLoad (combined with Q22) | Dimension: Coordination Entropy
Cross-team coordination creates invisible overhead that rarely gets priced in.

OPTION	POINTS
Low	0
Medium	50
High	100

Q19 Where is AI primarily expected to substitute effort?

Signal: AILeverage | Dimension: Measurement Maturity
The layer where AI replaces human effort determines whether it reduces cost or increases oversight burden.

OPTION	POINTS
Junior execution	0
Mid-level production	50
Senior thinking / review	100
No clear substitution	100

VALUE, LOAD & CONFIDENCE

Q20 Value Saturation — How much incremental value does adding more people create here?

Signal: GovernanceStrength | Dimension: Workforce Intensity
When adding people stops creating value, staffing becomes a cost center.

OPTION	POINTS
Significant additional value	0
Some additional value	50
Minimal additional value	100
No meaningful additional value	100

Q21 Senior Oversight Load — How much senior oversight does this engagement require?

Signal: SeniorDependency modifier (combined with Q13) | Dimension: Workforce Intensity
Disproportionate senior oversight signals structural delivery risk.

OPTION	POINTS
Less than usual	0
About the same	50
More than usual	100

Q22 Coordination & Decision Drag — How much coordination is required across teams?

Signal: CoordinationLoad modifier (combined with Q18) | Dimension: Coordination Entropy
Heavy coordination slows decisions and inflates the cost of every deliverable.

OPTION	POINTS
Minimal	0
Moderate	50
Heavy	100

Q23 Delivery Confidence — How confident are you in the delivery model for this engagement?

Signal: DeliveryConfidence — Confidence Signal | Dimension: HARD OVERRIDE if LOW
Low confidence often signals structural issues that pricing alone cannot fix.
Note: LOW confidence fires as a hard override BEFORE weighted scoring and unconditionally returns: Do Not Proceed Without Repricing.

OPTION	POINTS
High confidence	No points
Some concerns	No points
Low confidence	OVERRIDE

AI RISK

Q24 Are you using AI or an Agentic framework and what kind of projects are they being deployed on?

Signal: AIRiskPeak (MAX of Q24, Q25, Q26) | Dimension: Measurement Maturity
Agentic deployments in billable workflows directly affect pricing integrity and delivery accountability.

OPTION	POINTS
Yes	100
No	0
NA	0

Q25 How many human hours will you replace / augment with an AI agent in delivery workflows?

Signal: AIRiskPeak (MAX of Q24, Q25, Q26) | Dimension: Measurement Maturity

The scale of AI substitution determines whether cost savings flow to margin or create oversight overhead.

OPTION	POINTS
0–25%	0
25–50%	50
50–75%	100
75–100%	100
NA	0

Q26 Have you measured the commercial impact of using AI agents?

Signal: AIRiskPeak (MAX of Q24, Q25, Q26) | Dimension: Measurement Maturity

Unmeasured AI impact means you cannot price its contribution or account for its risks.

OPTION	POINTS
Yes	0
No	100
NA	0

OPEN SIGNAL

Q27 Is there anything about this engagement that feels risky or unusual?

Free-text — narrative only, no risk score.

Note: Free-text for narrative generation only. No effect on weighted score or verdict; AI cannot introduce numerical claims.

4. Signal to Dimension Routing

SIGNAL	QUESTIONS	DIMENSION	ROUTING RULE
ClientVolatility	Q11	Volatility Control	Answer points: low 0; medium 50; high 100
StakeholderLoad	Q12	Volatility Control	Answer points: low 0; medium 50; high 100
SeniorDependency	Q13, Q21	Workforce Intensity	MAX of both answer point values
CoordinationIntensity	Q14	Coordination Entropy	Answer points: low 0; medium 50; high 100
IterationLoad proxy	Q15	Workforce Intensity	Execution 0; balanced/technical 50; thinking/advisory/ strategy 100
IterationLoad	Q16	Workforce Intensity	Answer points: low 0; medium 50; high 100
ScopeElasticity	Q17	Commercial Exposure	Answer points: low 0; medium 50; high 100
CoordinationLoad	Q18, Q22	Coordination Entropy	MAX of both answer point values
AILeverage	Q19	Measurement Maturity	Junior 0; mid-level 50; senior/no substitution 100
GovernanceStrength	Q20	Workforce Intensity	Significant 0; some 50; minimal/none 100
PricingRigidity	Q10	Commercial Exposure	Retainer 0; hybrid/T&M/managed/SaaS 50; fixed/ commission/outcome 100
Confidence Signal	Q20, Q23	HARD OVERRIDE	Negative triggers override; no points added
AIRiskPeak	Q24,Q25,Q26	Measurement Maturity	MAX of three AI risk point values
EngagementState	Q7, Q9	Commercial Exposure	MAX of both answer point values

Model1 Point Legend

0	Zero answer risk points.
50	Fifty answer risk points.
100	One hundred answer risk points.
—	Outside the numeric composite: context, override or narrative.
